****Lab Trends****

The provided data includes numerous lab results for various blood tests, including but not limited to creatinine, glucose, potassium, BUN, AST (SGOT), hemoglobin, hematocrit, platelet count, white blood cell count, and others. The results are given at different time points relative to unit admission time. Detailed analysis requires a time-series visualization to track

changes in these values over the ICU stay. Specific trends like the change in creatinine levels, indicative of kidney function, and glucose levels, reflecting blood sugar control, warrant close attention. Similarly, tracking complete blood count parameters (hemoglobin, hematocrit, platelets, WBC) is crucial to monitor the patient's overall health and response to treatment. The presence of multiple measurements for the same lab test at different time points allows for a comprehensive assessment of the patient's condition and treatment efficacy.
