****Vital Trends****

NULL (Insufficient data provided)

****Laboratory Trends****

The provided data includes multiple lab results taken at different time points (in minutes from unit admit time). The following key lab values are available:

* **Chemistry Panel:** Anion gap, Glucose, BUN, Creatinine, Bicarbonate, Albumin, Chloride, Calcium, Total Protein, ALT (SGPT), AST (SGOT), Total Bilirubin, Phosphate, Potassium, Sodium, Magnesium. * **Hematology Panel:** RBC, Hgb, Hct, WBC x 1000, MCV, MCH, MCHC, RDW, -eos, -monos, -polys, -lymphs, -basos, MPV. * **Miscellaneous:** Ammonia (measured twice, once at 794 minutes and again at 2275 minutes from unit admit).

The lab results show some fluctuations in various parameters. For example, Magnesium levels show a decrease from 2.5 mg/dL at 794 minutes to 1.5 mg/dL at 258 minutes, followed by an increase to 1.6 mg/dL at 2275 minutes and a further increase to 2.3mg/dL at 3474 minutes. Glucose levels also fluctuate, with values of 127 mg/dL at 794 minutes, 95 mg/dL at 2275 minutes, 115 mg/dL at 4162 minutes, 82 mg/dL at 2711 minutes, 88 mg/dL at 3545 minutes, and 99 mg/dL at 3734 minutes. Similar trends are observed for other lab values, indicating the need for a more detailed longitudinal analysis. The specific clinical significance of these fluctuations cannot be determined without additional clinical context.

****Microbiology Tests****
