****Vital Trends****

NULL (Insufficient data provided. Vital signs would typically be included in the physical exam or a separate vital signs table.)

****Lab Trends****

The provided data includes numerous lab results for various blood chemistries and hematology parameters. These tests were performed at multiple time points during the patient's stay. Specific trends are difficult to state without time-series visualization, but the data includes repeated measurements of glucose (showing high levels throughout), potassium, chloride, bicarbonate, BUN, creatinine, albumin, total protein, troponin-I, and complete blood count (CBC) with differential. The repeated measurements allow for the assessment of trends in these parameters over time, which will be further explored in the visualization section.
