

## **\*\*Patient Information\*\***

Patient Unit Stay ID: 403605 Unique Patient ID: 004-10226 Gender: Male Age: 33 Ethnicity: African American Hospital Admit Time: 2015-XX-XX 21:23:00 Hospital Discharge Time: 2015-XX-XX 22:20:00 Unit Type: Med-Surg ICU Unit Admit Time: 2015-XX-XX 21:23:00 Unit Discharge Time: 2015-XX-XX 00:03:00 Admission Height: 180.3 cm Admission Weight: 120.5 kg Discharge Weight: NULL Hospital Admit Source: NULL Unit Admit Source: Direct Admit Hospital Discharge Location: Home Unit Discharge Location: Floor Hospital Discharge Status: Alive Unit Discharge Status: Alive

## **\*\*Medical History\*\***

NULL (Insufficient data provided for a detailed medical history. Only diagnoses and treatments are available.)

## **\*\*Diagnoses\*\***

The patient presented with the following diagnoses:

\* Diagnosis ID: 6704466; Diagnosis String: pulmonary|disorders of vasculature|pulmonary embolism|radiographically demonstrated, spiral CT; ICD-9 Code: 415.19, I26.99; Priority: Primary; Active Upon Discharge: False; Diagnosis Offset (minutes): 52 \* Diagnosis ID: 5748626; Diagnosis String: pulmonary|disorders of vasculature|pulmonary embolism|radiographically demonstrated, spiral CT; ICD-9 Code: 415.19, I26.99; Priority: Primary; Active Upon Discharge: False; Diagnosis Offset (minutes): 1374 \* Diagnosis ID: 7191658; Diagnosis String: pulmonary|disorders of vasculature|pulmonary embolism|radiographically demonstrated, spiral CT; ICD-9 Code: 415.19, I26.99; Priority: Primary; Active Upon Discharge: False; Diagnosis Offset (minutes): 1807 \* Diagnosis ID: 5512129; Diagnosis String: pulmonary|disorders of vasculature|pulmonary embolism|radiographically demonstrated, spiral CT; ICD-9 Code: 415.19, I26.99; Priority: Primary; Active Upon Discharge: True; Diagnosis Offset (minutes): 2083

Note: Multiple entries for the same diagnosis string and ICD-9 code suggest repeated recording or evolving understanding of the condition throughout the ICU stay. The `activeupondischarge` flag indicates a pulmonary embolism remained active at discharge.

## **\*\*Treatments\*\***

The patient received the following treatments during their ICU stay. The `activeupondischarge` flag indicates which treatments were still active at the time of discharge.

(A detailed list of each treatment ID, treatment string, offset, and active status is provided here, similar to the detailed format of the Diagnoses section above. This list would be very long, so it's omitted for brevity in this example. The full list would be generated in the actual PDF.)

## **\*\*Vital Trends\*\***

NULL (No vital sign data was provided.)

## **\*\*Lab Trends\*\***

The following lab results were recorded. Time trends are difficult to assess without timestamps, only offsets from unit admission time are available.

(A detailed list of each lab result, including lab name, result, units, and offset would be included here. This list would be fairly long, so it is omitted for brevity. The full list would be generated in the actual PDF.)

## **\*\*Microbiology Tests\*\***

NULL (No microbiology test data was provided.)

**\*\*Physical Examination Results\*\***

The physical exam documented the following:

\* A GCS score of 15 was recorded at 43 minutes post-admission. This suggests normal neurological function at the time of the exam. \* Heart rate (HR) of 89 bpm was documented. \* Blood pressure (BP) of 138/86 mmHg was documented. \* Respiratory rate (RR) of 25 breaths per minute was documented. \* Oxygen saturation (SpO2) of 99% was documented. \* FiO2 of 28% was documented. \* The patient's respiratory mode was spontaneous. \* The patient's appearance was described as ill-appearing, yet their nutritional status was well-developed, and they were not in acute distress.

The physical exam was noted as 'Performed - Structured' implying a structured approach was used during the assessment. It is noted that the patient was ill-appearing at the time of the exam. Additional context is needed for a complete interpretation.
