****5. Vital Trends****

NULL (Insufficient information provided. Vital signs would typically be found in a separate vital signs table)

****6. Lab Trends****

The provided data includes a comprehensive set of laboratory results, including hematology (Hgb, Hct, WBC, platelets, MCV, MCH, MCHC, RDW, PT, PTT) and chemistry (sodium, potassium, chloride, bicarbonate, BUN, creatinine, glucose, albumin, total protein, total bilirubin, ALT, AST, alkaline phosphatase, lipase, lactate, cortisol) values. These tests were performed at various times during the patient's stay. Significant variations may be present in these values; however, detailed trends require a time-series analysis of the data which is not possible without a precise timestamp or a time-series table. The missing ICD-9 codes also limit the ability to correlate lab results with specific diagnoses. Further analysis with a complete dataset is required to determine the clinical significance of these results.

A structured physical examination was performed early in the ICU stay (11 minutes after admission). The recorded values include vital signs (HR, BP, Resp Rate, O2 Sat), weight, intake and output, and a Glasgow Coma Scale (GCS) score. The GCS score indicates a relatively good neurological status (15/15). The information is limited to single values recorded at a single point in time. More comprehensive monitoring data would be needed to track changes.
