## **\*\*Medical History\*\***

Insufficient data provided to elaborate on the patient's detailed medical history beyond the admission and discharge information noted above. Further information is needed such as prior hospitalizations, surgeries, family history, social history, and medication history to provide a complete medical history. This section currently only reflects the information available in the provided data.

## **\*\*Vital Trends\*\***

NULL. No vital sign data was provided in the dataset.

## **\*\*Lab Trends\*\***

The provided data includes hematology lab results from two time points: one approximately 650 minutes and another approximately -105 minutes from unit admission. The following trends are observed:

\* \*\*Hemoglobin (Hgb):\*\* Decreased from 11.4 g/dL to 10.5 g/dL over the observation period. \* \*\*Hematocrit (Hct):\*\* Decreased from 33.4% to 31.3% over the observation period. \* \*\*Red Blood Cell Count (RBC):\*\* Decreased from 3.51 M/mcL to 3.24 M/mcL over the observation period. \* \*\*Mean Corpuscular Volume (MCV):\*\* Remained relatively stable around 96-97 fL. \* \*\*Mean Corpuscular Hemoglobin Concentration (MCHC):\*\* Remained stable at 34 g/dL. \* \*\*Mean Corpuscular Hemoglobin (MCH):\*\* Decreased slightly from 32.5 pg to 32.4 pg. \* \*\*Red Cell Distribution Width (RDW):\*\* Remained constant at 14.4%. \* \*\*White Blood Cell Count (WBC):\*\* Decreased from 4.5 K/mcL to 2.6 K/mcL. \* \*\*Platelets:\*\* Decreased from 106 K/mcL to 95 K/mcL. \* \*\*Mean Platelet Volume (MPV):\*\* Decreased slightly from 9.7 fL to 9.6 fL. \* \*\*FiO2:\*\* A single measurement of 31% was recorded 13 minutes after unit admission. This value suggests supplemental oxygen was being provided. More data points would be necessary to establish a trend.
