****Lab Trends****

The provided data includes multiple lab results for various blood tests, including complete blood count (CBC) parameters (WBC, RBC, Hgb, Hct, MCV, MCH, MCHC, RDW, platelets), and basic metabolic panel (BMP) parameters (sodium, potassium, chloride, bicarbonate, BUN, creatinine, anion gap). These tests were performed at multiple time points, indicated by the 'labresultoffset' (minutes from unit admit time). There are two sets of results – one around 903 minutes and another around 2337 minutes post-admission. There's also a set of initial lab values from before admission (-62 minutes). A detailed analysis would require charting these values over time to identify trends in electrolytes, renal function, and hematological parameters.
