****Vital Trends****

NULL. No vital sign data was provided.

****Lab Trends****

The lab data includes multiple blood tests performed at various times during the patient's stay. The data spans several days, with some tests repeated. Specific trends would need to be analyzed to identify significant changes in various parameters. Key lab values include: sodium, potassium, chloride, bicarbonate, BUN, creatinine, glucose, albumin, total protein, Hgb, Hct, MCV, MCH, MCHC, platelets, WBC, and troponin. The presence of multiple bedside glucose measurements suggests monitoring for glycemic control. The repeated hematology panels allow for assessment of changes in the complete blood count. The availability of multiple chemistry panels enables the tracking of electrolyte balance and renal function. Further analysis is needed to determine specific patterns and trends.

****Microbiology Tests****

NULL. No microbiology test data was provided.

****Physical Examination Results****

The physical exam documentation indicates that a structured physical exam was performed. The Glasgow Coma Scale (GCS) score was documented as 15 (Eyes 4, Verbal 5, Motor 6) at two different time points. The patient's admission weight was recorded as 55 kg.
