****Medical History****

Insufficient data provided to elaborate on the patient's detailed medical history beyond the diagnoses and treatments listed below. Further information, such as past medical conditions, family history, and social history, would be needed for a complete medical history section. The available data only covers the patient's current hospital and ICU stay.

****Diagnoses****

The patient presented with multiple diagnoses during their ICU stay. The diagnoses, their ICD-9 codes (where available), active status upon discharge, and priority are detailed below:

Note that multiple entries for the same diagnosis exist, likely reflecting different times of entry or reevaluation. The primary diagnosis upon discharge was Diabetic Ketoacidosis (DKA).

****Treatments****

The patient received various treatments during their ICU stay. The treatments administered, their active status upon discharge, and the time of entry are detailed below:

The physical exam indicates the patient was healthy appearing, well developed, and not in acute distress. Vital signs at one point included a heart rate of 108 bpm, blood pressure of 137/75 mmHg, respiratory rate of 27 breaths per minute, and oxygen saturation of 100%. A Glasgow Coma Scale (GCS) score of 15 (4+6+5) was recorded, indicating normal neurological function. Weight at admission was 63.7 kg, and fluid balance showed 680 mL net fluid loss.
