## **\*\*Lab Trends\*\***

The provided data includes a snapshot of laboratory results from a single time point, approximately 246 minutes before unit admission. The following labs were drawn: Hemoglobin (Hgb), Red Blood Cell count (RBC), Hematocrit (Hct), Aspartate aminotransferase (AST), Basophils (-basos), Calcium, Red cell distribution width (RDW), Total Bilirubin, Mean Corpuscular Volume (MCV), Blood Urea Nitrogen (BUN), Monocytes (-monos), Glucose, White Blood Cell count (WBC), Anion Gap, Eosinophils (-eos), Albumin, Lymphocytes (-lymphs), Alkaline Phosphatase, Mean Corpuscular Hemoglobin (MCH), Mean Corpuscular Hemoglobin Concentration (MCHC), Bicarbonate, Platelets, Alanine aminotransferase (ALT), Prothrombin time (PT), Prothrombin time - International Normalized Ratio (PT-INR), Magnesium, Troponin-I, Chloride, Urinary Specific Gravity, and Brain Natriuretic Peptide (BNP). A more comprehensive longitudinal view of these values over time would be needed to determine any trends and their clinical significance. The available data only shows the values at one point in time and does not give us any trend.
