NULL (Insufficient data provided. Vital signs data is needed to generate this section.)

### **\*\*6. Lab Trends\*\***

The provided lab data shows several blood tests performed at various time points during the patient's stay. The data includes complete blood counts (CBC) with differentials, basic metabolic panel (BMP) components, and arterial blood gases (ABGs). Specific lab values will be detailed in the tables below. Note that the 'labresultoffset' indicates the time the lab was drawn relative to unit admission. Trends in these values will be visualized in the chart description below. It's important to note that without knowing the exact admission time, we cannot determine the absolute times of the lab draws. However, the relative times are sufficient for trend analysis.

### **\*\*Summary Tables (Refer to CSV data section for detailed values)\*\***

The following tables summarize key laboratory findings, demonstrating trends in hematological parameters, electrolyte levels, and blood glucose levels over the patient's stay. Significant fluctuations in glucose levels are particularly notable

and warrant further investigation. Additional contextual clinical information is needed to interpret these results fully.
