****Lab Trends:****

The provided data includes laboratory results for Bedside Glucose and Magnesium, and Phosphate. The data shows the following:

* **Bedside Glucose:** Two measurements were taken at 32 and 189 minutes post-unit admission, both showing a value of 97 mg/dL. A third measurement at 394 minutes post-admission showed a value of 94 mg/dL. This suggests a slight decrease in glucose levels over time, although more data points would be needed to confirm a trend. * **Magnesium:** A single measurement was recorded at 182 minutes post-unit admission with a value of 2.3 mg/dL. * **Phosphate:** A single measurement was recorded at 182 minutes post-unit admission with a value of 2.3 mg/dL.

More frequent and comprehensive lab data would be necessary to fully characterize the patient's lab trends during their ICU stay.
