

****Patient Information****

Patient ID: 004-11474 Patient Unit Stay ID: 343094 Gender: Male Age: 73 Ethnicity: Caucasian Hospital Admission Time: 2015-01-01 01:47:00 Hospital Discharge Time: 2015-01-01 09:00:00 Hospital Discharge Status: Expired Unit Type: Med-Surg ICU Unit Admission Time: 2015-01-01 06:17:00 Unit Discharge Time: 2015-01-01 09:38:00 Unit Discharge Status: Expired Admission Height: 177.8 cm

****Medical History****

NULL (No detailed medical history provided in the data)

****Diagnoses****

The patient presented with multiple diagnoses during their ICU stay. The primary diagnosis upon admission was cardiac arrest. Other significant diagnoses included:

* Respiratory failure (failure to wean): This was a primary diagnosis entered 5 minutes after unit admission and again as a major diagnosis at 96 minutes. It was active upon discharge. * Anemia: This diagnosis was recorded as major at both 42 and 96 minutes post-admission and was active at discharge. * Congestive heart failure: A major diagnosis entered at both 5 and 96 minutes after unit admission, and active upon discharge. * Hyperlipidemia: Entered as major at 96 minutes, and active upon discharge. * Post-exploratory laparoscopy: A major diagnosis entered at 5 minutes post-admission. * Deep vein thrombosis (DVT) in the right lower extremity: A major diagnosis entered at 5 and 42 minutes post-admission and active at discharge. * Hypertension: Recorded as a major diagnosis at 42 minutes and as other at 5 minutes after unit admission, and active at discharge.

Note that some diagnoses lack ICD-9 codes, which limits the ability for further detailed analysis.

****Treatments****

The patient received a wide array of treatments during their ICU stay. These included:

* Cardiovascular and Pulmonary support: Oxygen therapy, bronchodilator medication, and midazolam (sedative) were administered. * VTE Prophylaxis: Compression boots were used. * Respiratory Intervention: A percutaneous tracheostomy was performed. * Consultations: Consultations were conducted by cardiology, nephrology, pulmonary/CCM, infectious disease, and surgery. * Other support: Nasogastric tube with suction, and physical and occupational therapy consultations were provided.

Many of these treatments were initiated early in the ICU stay and some continued until discharge.

****Vital Trends****

NULL (No vital signs data provided)

****Lab Trends****

NULL (No lab data provided)

****Microbiology Tests****

NULL (No microbiology data provided)

****Physical Examination Results****

The physical exam was documented as "Not Performed" at 37 and 94 minutes post-admission. This suggests a lack of documented physical exam findings, which is a significant gap in the patient's record.
