****Medical History:****

The patient was admitted to the hospital via the Emergency Department with a primary diagnosis of lower GI bleeding. The patient's history includes ischemic dilated cardiomyopathy, atrial fibrillation, and a history of coronary artery disease status post-CABG. Obstructive sleep apnea was also noted in the patient's history. Multiple instances of hypotension were documented throughout the ICU stay. The patient also had a history of anemia which was noted as being present at discharge. The patient was also diagnosed with coagulopathy related to Coumadin administration.

****Vital Trends:**** NULL (Insufficient data provided)

****Lab Trends:****

The provided lab data shows multiple blood tests performed at different time points during the patient's stay. Hemoglobin (Hgb) levels initially were 7.2 g/dL, improving to 8.6 g/dL by discharge. Hematocrit (Hct) followed a similar trend, rising from 22.6% to 27.3%. The patient's platelet count also showed variability. Other chemistry values such as potassium, sodium, BUN, creatinine, and albumin also exhibited changes over the time course of the stay.

****Microbiology Tests:**** NULL (Insufficient data provided)

****Physical Examination Results:****

The physical exam recorded a GCS score of 15 (Eyes 4, Verbal 5, Motor 6), blood pressure (BP) of 133/58 mmHg, heart rate (HR) of 72 bpm, respiratory rate (RR) of 16 breaths/min, oxygen saturation (SpO₂) of 98%, and FiO₂ of 21%. The patient's weight was recorded as 99.3 kg at one point in the ICU stay. A structured physical exam was performed.
