This report is limited by the absence of crucial medical information in the provided dataset. To generate a complete and informative report, please provide data on patient history, diagnoses, treatments, vital signs, laboratory results, microbiology tests, and physical examination findings. The current dataset only provides demographic and admission/discharge information.

The lack of temporal data (dates and times beyond years) severely limits the ability to create meaningful visualizations and summary tables. The provided data represents a snapshot of admission and discharge times but lacks the longitudinal detail necessary for clinical interpretation.
