\*\*History\*\*

Insufficient data provided to generate a detailed patient history. The available data only provides demographic information and admission/discharge times for both the hospital and ICU stay. Further information, such as presenting complaints, past medical history, family history, social history, and medication history, is required to construct a comprehensive history section.

Two bedside glucose measurements were recorded:

\* At 131 minutes from unit admission: 105 mg/dL \* At 464 minutes from unit admission: 103 mg/dL

The glucose levels show a slight decrease over time. However, without additional data points, it is impossible to establish a definitive trend. Further information is needed to assess whether these values fall within normal ranges or represent a clinically significant change.
