4. Treatments

NULL (Insufficient data provided)

5. Vital Trends

NULL (Insufficient data provided. Vital signs would need to be included in the dataset.)

6. Lab Trends

The provided lab data includes multiple blood tests performed at various times during the patient's stay. These tests include complete blood counts (CBC) with differentials (RBC, Hgb, Hct, MCV, MCH, MCHC, RDW, WBC x 1000, Platelets x 1000, MPV), and basic metabolic panels (BMP) including sodium, potassium, chloride, bicarbonate, BUN, creatinine, glucose, total protein, albumin, total bilirubin, ALT (SGPT), AST (SGOT), alkaline phosphatase, calcium, and others. There are also bedside glucose measurements and a TSH level recorded. A detailed time-series analysis of these results is presented in the CSV data section and visualized in the chart description below. Note that some lab results are missing values (empty strings or '<0.02' for troponin). These are noted in the CSV data.

7. Microbiology Tests

NULL (Insufficient data provided)

8. Physical Examination Results

* **Physical Exam Performed:** Yes, a structured physical exam was performed 24 minutes after unit admission. * **Admission Weight:** 72 kg * **Glasgow Coma Scale (GCS):** Estimated as 15 (Eyes: 4, Verbal: 5, Motor: 6) due to medication effects. This was recorded 24 minutes after unit admission.

Note: This report is based on the limited data provided. A more comprehensive report would require additional information such as the patient's medical history, detailed treatment plans, and vital sign trends. The ICD-9 codes suggest a neurological condition. The multiple lab draws, especially the hematology tests, suggest monitoring for possible anemia or infection. The GCS score, though estimated, suggests a neurologic condition. Further investigation would be needed to fully understand this patient's case.
